Power Maths White Rose Edition calculation policy, UPPER KS2

KEY STAGE 2

In upper Key Stage 2, children build on secure foundations in calculation, and develop fluency, accuracy and flexibility in their approach to the four operations. They work with whole numbers and adapt their skills to work with decimals, and they continue to develop their ability to select appropriate, accurate and efficient operations.

Key language: decimal, column methods, exchange, partition, mental method, ten thousand, hundred thousand, million, factor, multiple, prime number, square number, cube number

<p>Addition and subtraction: Children build on their column methods to add and subtract numbers with up to seven digits, and they adapt the methods to calculate efficiently and effectively with decimals, ensuring understanding of place value at every stage.</p> <p>Children compare and contrast methods, and they select mental methods or jottings where appropriate and where these are more likely to be efficient or accurate when compared with formal column methods.</p> <p>Bar models are used to represent the calculations required to solve problems and may indicate where efficient methods can be chosen.</p>	<p>Multiplication and division: Building on their understanding, children develop methods to multiply up to 4-digit numbers by single-digit and 2-digit numbers.</p> <p>Children develop column methods with an understanding of place value, and they continue to use the key skill of unitising to multiply and divide by 10, 100 and 1,000.</p> <p>Written division methods are introduced and adapted for division by single-digit and 2-digit numbers and are understood alongside the area model and place value. In Year 6, children develop a secure understanding of how division is related to fractions.</p> <p>Multiplication and division of decimals are also introduced and refined in Year 6.</p>	<p>Fractions: Children find fractions of amounts, multiply a fraction by a whole number and by another fraction, divide a fraction by a whole number, and add and subtract fractions with different denominators. Children become more confident working with improper fractions and mixed numbers and can calculate with them.</p> <p>Understanding of decimals with up to 3 decimal places is built through place value and as fractions, and children calculate with decimals in the context of measure as well as in pure arithmetic.</p> <p>Children develop an understanding of percentages in relation to hundredths, and they understand how to work with common percentages: 50%, 25%, 10% and 1%.</p>

Adding tenths

Link measure with addition of decimals.
*Two lengths of fencing are 0.6 m and 0.2 m.
 How long are they when added together?*

Use a bar model with a number line to add tenths.

$0.6 + 0.2 = 0.8$
6 tenths + 2 tenths = 8 tenths

Understand the link with adding fractions.

$$\frac{6}{10} + \frac{2}{10} = \frac{8}{10}$$

6 tenths + 2 tenths = 8 tenths

$0.6 + 0.2 = 0.8$

Adding decimals using column addition

Use place value equipment to represent additions.
Show $0.23 + 0.45$ using place value counters.

Use place value equipment on a place value grid to represent additions.

Add using a column method, ensuring that children understand the link with place value.

Year 5 Subtraction

Column subtraction with whole numbers

Use place value equipment to understand where exchanges are required.

$$2,250 - 1,070 = ?$$

Represent the stages of the calculation using place value equipment on a grid alongside the calculation, including exchanges where required.

$$15,735 - 2,582 = 13,153$$

Use column subtraction methods with exchange where required.

$$62,597 - 18,034 = 44,563$$

Now subtract the 10s.
Exchange 1 hundred for 10 tens.

Subtract the 100s, 1,000s and 10,000s.

<p>Year 5 Multiplication</p>			
<p>Understanding factors</p>	<p>Use cubes or counters to explore the meaning of 'square numbers'.</p>	<p>Use images to explore examples and non-examples of square numbers.</p>	<p>Understand the pattern of square numbers in the multiplication tables.</p>

25 is a square number because it is made from 5 rows of 5.

Use cubes to explore cube numbers.

8 is a cube number.

$$8 \times 8 = 64$$

$$8^2 = 64$$

12 is not a square number, because you cannot multiply a whole number by itself to make 12.

Use a multiplication grid to circle each square number. Can children spot a pattern?

Multiplying by 10, 100 and 1,000

Use place value equipment to multiply by 10, 100 and 1,000 by unitising.

$4 \times 1 = 4 \text{ ones} = 4$	
$4 \times 10 = 4 \text{ tens} = 40$	
$4 \times 100 = 4 \text{ hundreds} = 400$	

Understand the effect of repeated multiplication by 10.

$$7 \times 10 = 70$$

$$7 \times 100 = 7,000$$

$$7 \times 1,000 = 70,000$$

Understand how exchange relates to the digits when multiplying by 10, 100 and 1,000.

Dividing up to four digits by a single digit using short division

Explore grouping using place value equipment.

$$268 \div 2 = ?$$

*There is 1 group of 2 hundreds.
There are 3 groups of 2 tens.
There are 4 groups of 2 ones.*

$$264 \div 2 = 134$$

Use place value equipment on a place value grid alongside short division. The model uses grouping. A sharing model can also be used, although the model would need adapting.

Lay out the problem as a short division.

*There is 1 group of 4 in 4 tens.
There are 2 groups of 4 in 8 ones.*

Work with divisions that require exchange.

Use short division for up to 4-digit numbers divided by a single digit.

		0	5	5	6
	7	3	³ 8	³ 9	⁴ 2

$$3,892 \div 7 = 556$$

Use multiplication to check.

$$556 \times 7 = ?$$

$$6 \times 7 = 42$$

$$50 \times 7 = 350$$

$$500 \times 7 = 3500$$

$$3,500 + 350 + 42 = 3,892$$

Using knowledge of factors and partitions to compare methods for multiplications

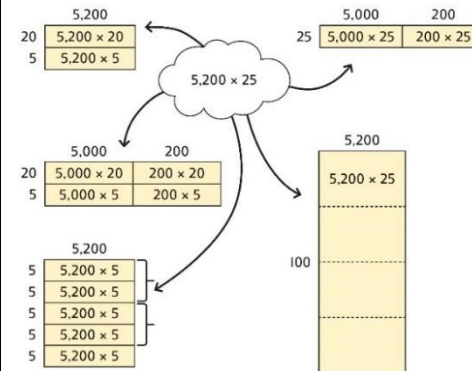

Use equipment to understand square numbers and cube numbers.

$$5 \times 5 = 5^2 = 25$$

$$5 \times 5 \times 5 = 5^3 = 25 \times 5 = 125$$

Compare methods visually using an area model. Understand that multiple approaches will produce the same answer if completed accurately.

Represent and compare methods using a bar model.

Use a known fact to generate families of related facts.

Use factors to calculate efficiently.

$$15 \times 16$$

$$= 3 \times 5 \times 2 \times 8$$

$$= 3 \times 8 \times 2 \times 5$$

$$= 24 \times 10$$

$$= 240$$

Understanding factors

Use equipment to explore different factors of a number.

Recognise prime numbers as numbers having exactly two factors. Understand the link with division and remainders.

Recognise and know primes up to 100. Understand that 2 is the only even prime, and that 1 is not a prime number.
